

UNIVERSIDAD DE GUADALAJARA  
Centro Universitario de Ciencias Exactas e Ingenierías

Jalisco Mexico, Monday, March 13<sup>th</sup> 2017

**Letter of recommendation**

I am addressing you in order to recommend you Virginia Sayde Kehl Gutiérrez who is currently applying to this master.

I know the candidate Virginia since 2012 when she started her Bachelor's degree in Computer Engineering at the University of Guadalajara, CUCEI; where I was his teacher on the database workshop. It was precisely in those classes that I noticed the deep interest that Virginia has on computer science and the eager desire she possess to delve more into this area.

In addition to the excellent results in its evaluations, Virginia was noted for its level of determination.

Undoubtedly, if you accept Virginia, you will have a student who knows how to work and develop herself within a team environment as well as independently.

Her enthusiasm has brought her to you and her commitment has helped her to grow as a person and as a professional.

With that said, I can guarantee with certainty that Virginia is the person you are looking for. Her knowledge and willingness to work and learn more in the area of computer science are the first step in her professional journey, it is feasible to say that she will be a successful student in her mastership and will contribute invaluablely to her institution.

I am sure that the institutions where Virginia has gone through and through in the course of her life and career will be proud to have had her among her students.

Cordially

**Fernando Carrillo Castro**

Professor at the computer science department  
IT Systems consultant in Oracle
